

RadExPro 2014.2 release notes

We announce the next update to be ready – the **RadExPro 2014.2**.

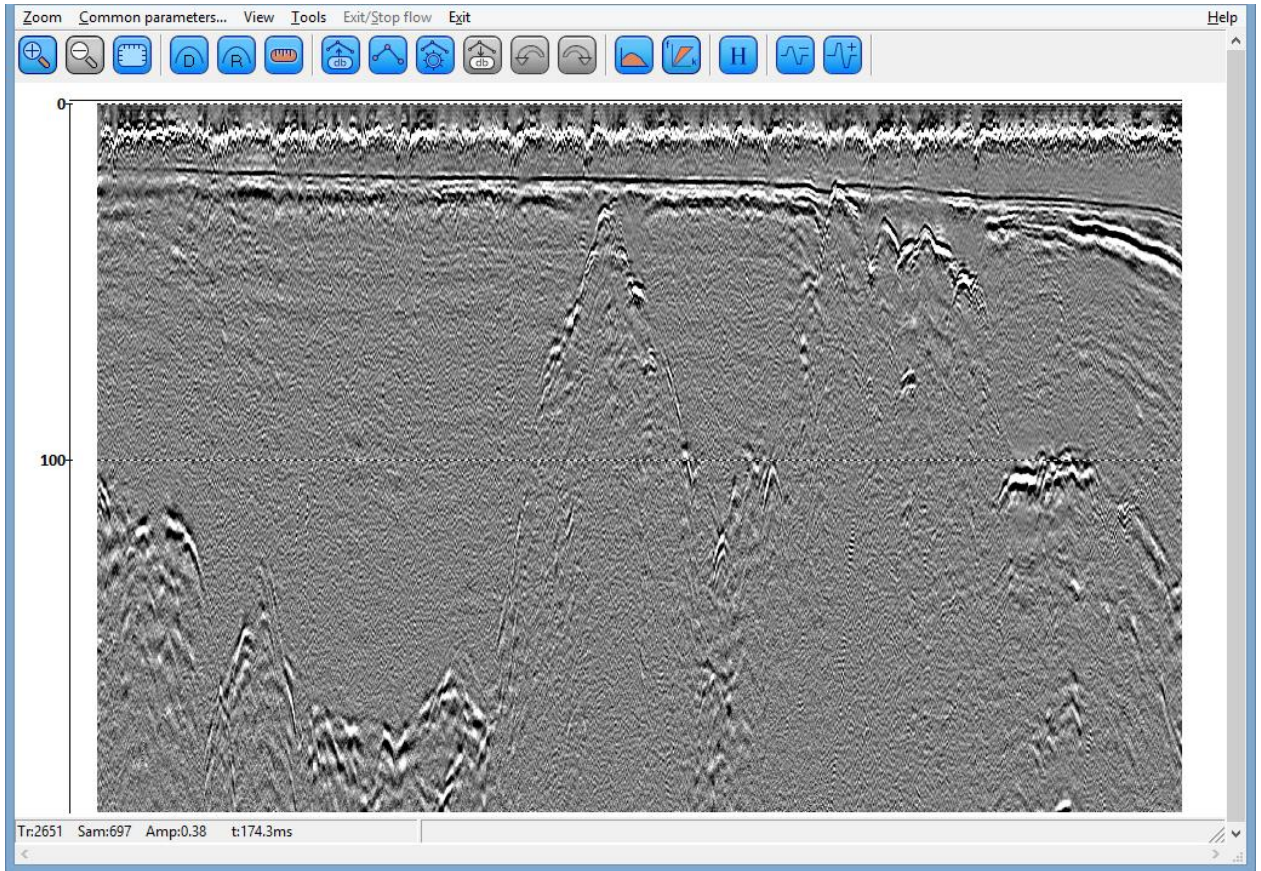

The main improvements are as following:

- **MaxPower Autostatics** module can now calculate residual static correction for both 2D and 3D data.
- **F-K Amplitude Power** module can now operate in sliding windows providing strong random noise attenuation while preserving local steep coherent events.

Original data with steep reflections and a lot of random noise:

A result of F-K Amplitude Power algorithm applied in sliding windows:

- A brand-new **Project Manager** with a lot of useful functionality:

As usual, we encourage our customers with active maintenance to contact us at support@radexpro.ru and receive the update for free.
